

TANK TESTING

Stricter environmental regulations, increasing inspections, and tougher penalties are leading to a demand for improved environmental safety.

To help reduce the chances of soil contamination and assist in compliance with current legislation Tokheim offers an accurate test of your underground tanks.

ACCURATE & COST-EFFECTIVE

Tokheim use the most innovative technology to ensure that our clients receive the most accurate tank testing results. Our engineers use the **USTest UST2001** system based on world renowned ultrasonic technology. This technology is extremely popular due to its ease of use, accurate results and affordability. We are able to accurately determine the integrity of underground storage tanks

without having to add fuel to the tank or spend countless hours on site.

By enclosing all of the necessary components into a handy carrying case, we no longer have to use an expensive van or large vehicle to perform your testing and as a client of Tokheim **you see the cost benefits.**

FLEXIBILITY IN THE FIELD

The testing probes have no moving parts and do not require re-calibration. The test results are calculated and stored on the testing unit, and reporting can be done in the field or in the office. Because of the testing unit's portability, we just

close the carrying case and take it with us into the office, home or hotel for safe and easy storage. The system ensures you **receive accurate reporting without the costs** usually associated with older solutions.

REDUCED DOWN-TIME

Testing can be performed on tanks up to 93,000 litres with as little as 375mm of product in the tank. The durable ultrasonic probes can test many

different kind of liquids and can be installed in an opening as small as 50mm in diameter.

FUEL ZONE BENEFITS

- Fully Computerized
- 6 Tank Capability
- Test Levels Down to 375mm and tanks up to 93,000 litres
- No Calibration Necessary
- Exceeds U.S. EPA Standards
- NWGLDE Listed

ULLAGE BENEFITS

- Fully Computerized
- No Fuel Delivery Necessary
- Five Minute Test
- Works with Nitrogen or Vacuum
- Exceeds U.S. EPA Standards
- NWGLDE Listed Tokheim
